

**WHAT IS CLAIMED IS:**

1. A computer generated user interface screen associated with a patient, the user interface screen comprising:  
an interface form component associated with a patient condition; and  
a contextual link associated with available contextual data, the available contextual data associated with the patient condition.
2. The user interface screen of claim 1, wherein the contextual link comprises a label indicative of the available contextual data.
3. The user interface screen of claim 1, wherein the contextual link is configured to access a second user interface screen associated with the available contextual data.
4. The user interface screen of claim 1, wherein the available contextual data is associated with a patient medical history.
5. The user interface screen of claim 1, wherein the available contextual data is associated with a chronic disease.
6. The user interface screen of claim 1, wherein the available contextual data is associated with family history.
7. The user interface screen of claim 1, wherein the available contextual data is associated with a current medication.
8. The user interface screen of claim 1, wherein the available contextual data is associated with a social history.
9. The user interface screen of claim 1, further comprising a test link associated with the patient.

10. A system comprising:  
a processor; and  
storage coupled to the processor, the storage comprising:  
instructions for accessing a patient record; and  
instructions for providing a user interface screen, the user interface screen including a medical form component associated with a patient condition and a contextual link associated with available contextual data, the available contextual data associated with the patient condition.
11. The system of claim 10, further comprising a portable interface device configured to display the user interface screen.
12. The system of claim 10, wherein the network interface comprises a wireless network interface.
13. The system of claim 10, wherein the contextual link comprises a label indicative of the available contextual data.
14. The system of claim 10, wherein the contextual link is configured to access a second user interface screen associated with the available contextual data.
15. The system of claim 10, wherein the available contextual data is associated with a patient medical history.
16. The system of claim 10, wherein the available contextual data is associated with a chronic disease.
17. The system of claim 10, wherein the user interface screen further comprises a test link associated with a patient.
18. The system of claim 10, further comprising a database.
19. The system of claim 18, wherein the database includes the patient record.

20. The system of claim 19, wherein contextual link is derived from data stored in the patient record.
21. The system of claim 10, wherein the user interface screen comprises a combination of a template and patient data.
22. The system of claim 10, wherein the user interface screen further comprises a link to a study.
23. The system of claim 10, wherein the user interface screen is a history of present illness screen.
24. A medical interface comprising:  
a plurality of interface pages;  
wherein at least one page of the plurality of interface pages includes a present illness form component associated with a patient condition and a contextual link associated with the patient condition, the contextual link having a label indicative of available contextual data; and  
wherein the contextual link is configured to access a second page associated with the available contextual data, the second page including a link to the at least one page that includes the present illness form component.
25. The medical interface of claim 24, wherein the available contextual data is associated with a patient medical history.
26. The medical interface of claim 24, wherein the available contextual data is associated with a chronic disease.
27. The medical interface of claim 24, wherein the at least one page further comprises a test link associated with a patient.
28. A method of providing a medical documentation interface, the method comprising:  
receiving a request for an interface screen associated with a patient;

accessing data associated with the patient; and  
providing the interface screen including a medical form component associated  
with a patient condition and a contextual link associated with available  
contextual data, the available contextual data being associated with the  
patient condition.

29. The method of claim 28, wherein the contextual link comprises a label  
indicative of the available contextual data.

30. The method of claim 28, wherein the contextual link is configured to  
access a second interface screen associated with the available contextual data.

31. The method of claim 28, wherein the available contextual data is  
associated with a patient medical history.

32. The method of claim 28, wherein the available contextual data is  
associated with a chronic disease.

33. The method of claim 28, wherein the interface screen is a history of  
present illness type of interface screen.

34. The method of claim 28, further comprising providing a second interface  
screen upon selection of the contextual link.

35. The method of claim 28, further comprising retrieving template data and  
patient data.

36. The method of claim 28, further comprising storing current encounter data.

37. An interface device comprising:  
a display configured to display an interface screen comprising an interface  
form component associated with a patient condition and a contextual  
link associated with available contextual data, the available contextual  
data associated with the patient condition.

38. The interface device of claim 37, wherein the interface device is a computer tablet.

39. The interface device of claim 37, wherein the interface device is a personal digital assistant portable computer.
